Frentzel, MPH

**Special Thanks !!**

# Learning Objectives

<b>Describe</b>	<b>Describe core elements of an antibiotic stewardship program and the related CMS regulations.</b>
<b>Recognize</b>	<b>Recognize strategies of tracking and analyzing data along with its importance in development of a successful antimicrobial stewardship program</b>
<b>Demonstrate</b>	<b>Demonstrate practical steps that can be taken to implement each element of data-driven antibiotic stewardship program.</b>
<b>Identify</b>	<b>Identify different approaches to overcome commonly encountered barriers in antimicrobial stewardship program implementation.</b>

## DEFINITION

**“optimize the treatment of infections while reducing the adverse events associated with antibiotic use”**

# DATA POINTS

70% of NH residents **receive** one or more courses of antibiotics in a year

40%-75% of antibiotics prescribed in NH may be **unnecessary or inappropriate**

Cost of antibiotic use in NHs is \$ **38 to 137 million** per year

Residents with higher antibiotic use are at **24 % higher** risk of antibiotic related **harm**

20 % of **providers prescribe 80 %** of antibiotics

40-75% of antibiotics in NH are prescribed **incorrectly**

50 % of antibiotics in NH are prescribed for **longer duration than necessary**

**DEPARTMENT OF HEALTH AND  
HUMAN SERVICES**

**Centers for Medicare & Medicaid  
Services**

**42 CFR Parts 405, 431, 447, 482, 483,  
485, 488, and 489**

**[CMS-3260-F]**

**RIN 0938-AR61**

# Establishing ASP in Nursing Home: the CDC Core Elements

The Core Elements of  
**Antibiotic Stewardship**  
for Nursing Homes

National Center for Emerging and Zoonotic Infectious Diseases  
Division of Healthcare Quality Promotion

CS256066-A

## Summary of Core Elements for Antibiotic Stewardship in Nursing Homes

### **Leadership commitment**

Demonstrate support and commitment to safe and appropriate antibiotic use in your facility

### **Accountability**

Identify physician, nursing and pharmacy leads responsible for promoting and overseeing antibiotic stewardship activities in your facility

### **Drug expertise**

Establish access to consultant pharmacists or other individuals with experience or training in antibiotic stewardship for your facility

### **Action**

Implement **at least one** policy or practice to improve antibiotic use

### **Tracking**

Monitor **at least one process** measure of antibiotic use and **at least one outcome** from antibiotic use in your facility

### **Reporting**

Provide regular feedback on antibiotic use and resistance to prescribing clinicians, nursing staff and other relevant staff

### **Education**

Provide resources to clinicians, nursing staff, residents and families about antibiotic resistance and opportunities for improving antibiotic use

# Obtain Leadership Statement of Support

Written statement of support for antimicrobial stewardship program (ASP)

Outline duties of the ASP team members

Communicate expectations with the nursing staff and prescribing providers

Create culture that promote appropriate antibiotic use

**FROM:** [Executive Director, Medical Director, Director of Nursing, etc.]

**DATE:** [Date]

**RE:** Antimicrobial Stewardship Program

---

Antibiotics are among the most commonly prescribed medications within long-term care facilities. However, misuse of antibiotics can lead to undesirable outcomes including emergence of multidrug resistant pathogens, development of *Clostridium difficile* infections, adverse drug reactions, increased mortality, and higher costs.

As part of the continuing commitment to provide high quality care to all our residents, the leadership team of [facility name] has created an Antibiotic Stewardship Program (ASP). This program will promote appropriate use of antibiotics in our facility. The overall goal of ASP is to prevent undesirable outcomes related to antibiotic misuse by optimizing the selection of drug, dose, route, and duration of therapy. Antibiotic use protocols and systems to monitor antibiotic use will be implemented to achieve ASP goals.

The ASP will be a part of the facility's Infection Prevention and Control Program. Infection preventionist will play a central role and the key leaders accountable for the program include [Medical Director, Director of Nursing, Consultant Pharmacist, etc.]. This multidisciplinary team will regularly review appropriateness of antibiotic courses and make recommendations for adjustment in practice where necessary, establish new or revise existing protocols relevant to appropriate antibiotic prescribing, monitor and report patterns of antibiotic use and resistance; and provide education on responsible use of antibiotics.

The success of this initiative requires the full participation and support of those who prescribe, prepare, administer, and receive antimicrobial therapy. The facility will provide adequate staffing and resources to support the functions and goals of the ASP. ASP team will engage prescribing providers, staff, residents, and residents' families to ensure that antibiotic use protocols can be implemented smoothly. Facility leadership is confident that with the help of frontline staff, support of prescribing providers, understanding of resident and families, and guidance of ASP team, we will improve quality of care and minimize untoward consequences of antibiotic therapy.

# Leadership Support Statement

<https://asap.nebraskamed.com>

# Establish Accountability

## Empower leaders of the program

- Medical Director
- Director of Nursing
- Consultant Pharmacist

## Provide dedicated time for ASP activities to:

- Program leaders
- Infection Preventionists (who will support day to day activities of ASP)
- Infection Advisory Committee of AMDA has recommended Infection Preventionists should get 10 hours/week dedicated towards ASP activities

**Partner With  
Local  
Experts**

**or**

**Develop  
Expertise  
Within The  
Facility**

Establish access to individuals with antibiotic expertise to implement antibiotic stewardship activities

Examples of experts include:

- Consultant pharmacists who have received specialized infectious diseases or antibiotic stewardship training
  - Many Consultant Pharmacists are being trained by their companies on Antimicrobial Stewardship concepts and activities
  - Training is also being made available to consultant pharmacists by national societies.
- Antibiotic stewardship program leads at the hospitals within your referral network.
- Develop relationships with infectious disease consultants in your community
- Medical Directors and Lead Physicians can also take courses that can help them prepare for ASP activities including CDC/SHEA/AMDA course.

# Impact of Partnership with ID Specialists

- 30% decrease in total antibiotic use
- 64% decline in tetracyclines use
- 61% decline in clindamycin use
- 38% decline in fluroquinolones & sulfamethoxazole/trimethoprim
- 28% decline in beta lactam/ beta lactamase inhibitor use
- Rate of positive *C. difficile* tests at LTCF also declined while rate were the same in the hospital

# Develop Antibiotic Stewardship Policy

Outline the goals of the Antibiotic Stewardship program, structure and procedures of the antimicrobial stewardship committee along with responsibilities of its members

<b>SUBJECT:</b>	<b>Antimicrobial Stewardship Program</b>
<b>POLICY NO.:</b>	<b>[Policy number]</b>
<b>EFFECTIVE DATE:</b>	<b>[Policy effective date]</b>
<b>LAST REVISION DATE:</b>	<b>[Date of last policy revision]</b>
<b>RELEVANT REGULATION:</b>	CFR § 483.80(a)(1)-(4)
<b>APPROVED BY:</b>	<b>[Approving individual or committee]</b>

---

**Policy Statement:**

The goal of the Antimicrobial Stewardship Program (ASP) is to promote the appropriate use of antimicrobials in order to maximize treatment outcome and minimize unintended consequences of antimicrobial therapy. The ASP aims to improve antibiotic prescribing practices through the development and implementation of antibiotic use protocols and a system to monitor antibiotic use.

**Structure:**

The Antimicrobial Stewardship Committee has been established to provide support and oversee activities of the ASP. This committee and the ASP will be part of the Infection Prevention and Control Program (IPCP). The IPCP will directly report all ASP-related activities and outcomes to the Quality Assurance and Performance Improvement (QAPI) Committee. QAPI Committee will in turn report all ASP activities and outcomes to nursing staff, prescribing clinicians, and other relevant staff.

**Procedure:**

1. Membership of the Antimicrobial Stewardship Committee
  - a. Medical Director (required)
  - b. Director of Nursing (required)
  - c. Infection Preventionist (required)
  - d. Consultant Pharmacist (required)
  - e. Additional member as deemed appropriate by the Antimicrobial Stewardship Committee which may include Nurse representative, Nursing Aide representative, QAPI Director, Administrator or other healthcare workers
  
2. Meetings

Antimicrobial Stewardship Committee will meet at least quarterly to review ASP-related activities and outcomes. The committee will also report its activities along with antibiotic use and resistance data to QAPI Committee at least on an annual basis.
  
3. Responsibilities
  - a. Ensure appropriate use of antimicrobials through development and implementation of institutional policies, procedures, treatment algorithms, or other relevant initiatives

Some facilities prefer a brief policy version. A summarized modifiable version was developed by Nebraska ASAP and template is available at:

<https://asap.nebraskamed.com/long-term-care/tools-templates-long-term-care/>

# FORM AN ANTIBIOTIC STEWARDSHIP COMMITTEE/TEAM

---

## Required

- Infection Preventionist
- Medical Director or a designated lead physician
- Director of Nursing or Assistant Director of Nursing
- Consultant Pharmacist

## Optional

- Administrator
- Prescribing Provider (Attending Physician, Nurse Practitioner or Physician Assistant)
- Nurse representative
- Nurse Aid representative
- Allied Health Professional
- Representative from the Resident and Family Council

Committee should meet at least quarterly and review policy/program annually and as needed

# Task Antibiotic Stewardship Committee with Specific Responsibilities

## Antibiotic Stewardship Committee should:

- Support and promote antibiotic use protocols
- Develop and maintain a system to monitor antibiotic use
- Develop and maintain a system to monitor resistance data
- Report antibiotic use and resistance data regularly to frontline staff and prescribing providers along with goals of antibiotic stewardship programs
- Provide education on antibiotic stewardship to prescribing providers and nursing staff in addition to residents and families

## Antibiotic use protocols include:

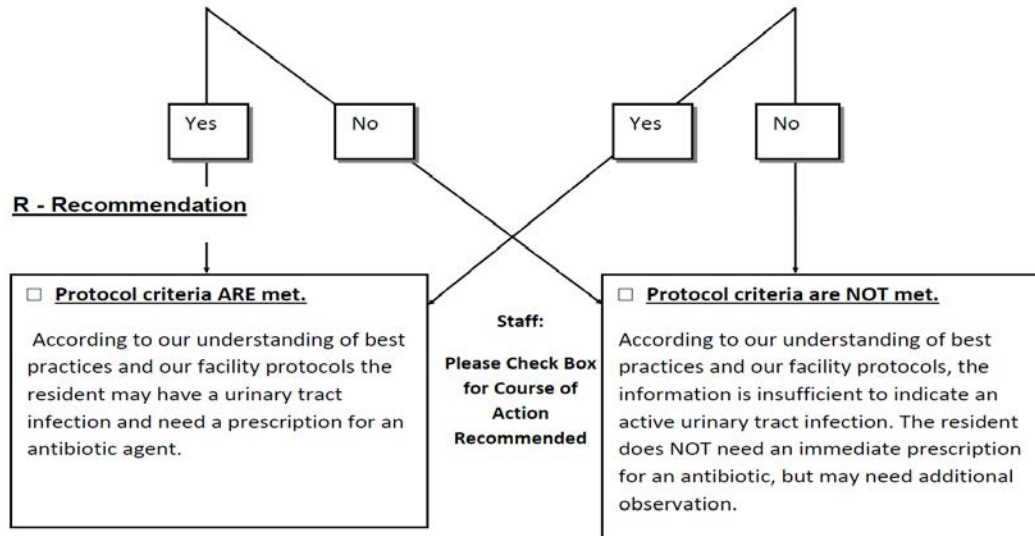

- Requirement of specific dose, duration and indication with all antibiotic orders
- Introduction of standardized tools and criteria for assessment and communication of infections (tools may also include decision support algorithms)
- Guidance on prescribing based on national recommendations and facility specific data which also highlights choosing narrow-spectrum antibiotics whenever possible
- Emphasis on reassessment of empiric antibiotics after 2 to 3 days for appropriateness and necessity (Post-Prescribing Review or Antibiotic time out)

# Antibiotic Use Protocols

# Effectiveness of Assessment/ Communication Tool

## A – Assessment (check boxes and determine recommendation prior to call)

<p><b>Resident with indwelling catheter:</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> fever of 100°F (38°C) or 2°F (1°C) greater than baseline</li> <li><input type="checkbox"/> new costovertebral tenderness</li> <li><input type="checkbox"/> rigors</li> <li><input type="checkbox"/> new delirium</li> <li><input type="checkbox"/> hypotension</li> </ul> <p><b>Any one of the above present</b></p>	<p><b>Resident without indwelling catheter:</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Acute dysuria alone;</li> </ul> <p style="text-align: center;"><b>OR</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Single temperature of 100°F (38°C), multiple at 99°F (37°C) or above, or 2°F (1°C) degrees greater than baseline AND at least one new or worsening of the following:             <ul style="list-style-type: none"> <li><input type="checkbox"/> urgency    <input type="checkbox"/> suprapubic pain</li> <li><input type="checkbox"/> frequency    <input type="checkbox"/> gross hematuria</li> <li><input type="checkbox"/> costovertebral angle tenderness</li> <li><input type="checkbox"/> new/worsening urinary incontinence</li> </ul> </li> </ul>

# RAMP\* Form Part B: Review of treatment

\*Resident Antimicrobial Management Plan (part of STAUNCH Project)

Part B: Start to fill in 48-72 hours after commencing treatment  
All sections should be completed by end of treatment period

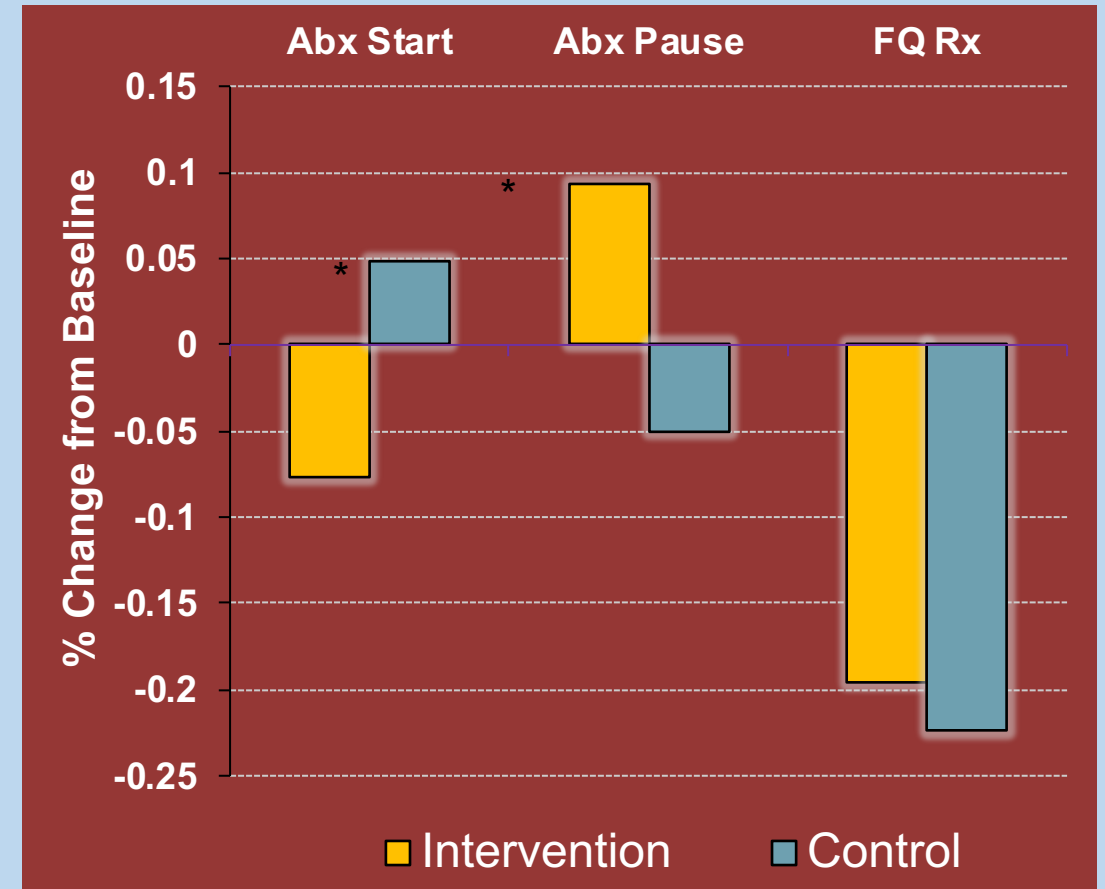

Plan no.	Resident Name	Room no.
Good Practice Points		Nurse Records
B 1	Review clinical progress after 48-72 hours of treatment  Review of progress: due 48-72h after commencing treatment (See section A6) Time: ..... : ..... [24 hr clock] Date: ..... / ..... / .....  The resident: [tick all applicable] <input type="checkbox"/> now has <u>no</u> signs or symptoms of infection <input type="checkbox"/> was in hospital <input type="checkbox"/> has improved <input type="checkbox"/> remains the same <input type="checkbox"/> has new signs / symptoms [state details] .....  Is resident worse? YES / NO If YES: State action taken .....	Sign & Date
B 2	Stop date of treatment confirmed or review date planned  Total number of days treatment prescribed: ..... (days) Treatment STOPPED: Time: ..... : ..... [24 hr clock] Date: ..... / ..... / ..... OR REVIEW of treatment planned for: Date: ..... / ..... / .....	Sign & Date
B 3	Resident re-examined by a doctor for the <u>same</u> condition? YES / NO If YES was this:  <input type="checkbox"/> Scheduled GP visit <input type="checkbox"/> Extra GP visit <input type="checkbox"/> Out of Hours Service visit <input type="checkbox"/> Hospital A&E visit <input type="checkbox"/> Hospital Admission <input type="checkbox"/> Hospital Out-Patient visit  Time: ..... : ..... [24 hr clock] Date: ..... / ..... / .....	Sign & Date
B 4	Results of samples / swabs recorded  Sample results: [tick all applicable] See section A4 overleaf <input type="checkbox"/> No new samples or swabs sent before this treatment started <input type="checkbox"/> Results not available yet <input type="checkbox"/> Negative result (no growth) <input type="checkbox"/> Positive result (micro-organisms grown) [state details if known] ..... If positive result: Is this micro-organism sensitive to the antimicrobial prescribed? [tick one option] <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Don't know <input type="checkbox"/> Not tested by laboratory	Sign & Date
B 5	Outcome of antimicrobial treatment documented  Treatment outcome (at end of course) <input type="checkbox"/> Symptoms completely resolved <input type="checkbox"/> Symptoms partly resolved <input type="checkbox"/> No improvement Additional antimicrobial treatment prescribed? YES / NO If YES: Commence new RAMP form	Sign & Date
For Study Use Only	Ref. No.	B1 B2 B3 B4 B5

## Post – Prescribing Review of Antibiotics

- Cluster RCT in 30 NHs in United Kingdom
- Introduced a form with Part A to be filled out at the start of antibiotic and Part B after 48 hour of treatment
- No additional intervention
- Part A was filled 86% of time and Part B 57% of time
- Antibiotic starts unchanged
- Antibiotic utilization decreased by 10%

# Education of Nursing Staff and Providers

- Cluster RCT in 58 NHs in Sweden
- Prescribing guideline disseminated through interactive case-based sessions w/ nurses & providers
- Total antibiotic prescriptions decreased and wait and see approach by physicians increased

# Tracking and Monitoring Antibiotic Use

Require review of antibiotics:

- On admission to and transfer out of the facility.
- When it is prescribed by a provider not on facility's staff (like ED provider)
- Of all ongoing and completed courses of antibiotics by consultant

Periodic (quarterly) Tracking of adherence to antibiotic use protocols

Conduct at least an annual review of antibiotic use data in the facility to identify:

- Specific antibiotic that is being excessively used or
- Providers who are using excessive antibiotics as compared to their peers.

Reach out to pharmacy to provide antibiotic use data and/or use infection/ antibiotic start log to obtain antibiotic use measurements like:

- Antibiotic starts/ 1000 resident days
- Days of therapy/ 1000 resident days

Antibiotic Use and Infection Assessment Trends

Parameter	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Total	Trend
Antibiotic Start / 1000 RD	11.29	7.14	7.98	3.99	5.88	9.78	6.67	8.42	2.44	3.76	5.56	5.56	78.46	
Days of Therapy / 1000 RD	69.35	38.78	41.87	29.91	56.47	80.43	34.29	58.95	37.80	65.73	53.33	53.33	620.25	
Used Assessment Tool	86%	86%	75%	75%	100%	78%	86%	75%	100%	75%	80%	80%	83%	
Met Criteria to Start ABX	67%	50%	50%	33%	100%	71%	50%	50%	100%	100%	100%	100%	73%	
UA, reflex C&S / 1000 RD	2.42	3.06	2.99	2.99	3.53	3.26	2.86	3.16	0.00	0.94	3.33	2.22	30.76	

Antibiotic Use and Infection Assessment Trends

# Tracking and Monitoring Resistance Data

Perform at least annual review of surveillance data pertaining to microorganisms related to antibiotic use like:

- Methicillin-resistant *Staphylococcus aureus*
- Carbapenemase-resistant *Enterobacteriaceae*
- *Clostridium difficile*
- Any other drug resistant organism that a facility seems to be struggling with

Make sure that the facility's contract with laboratory includes provision of facility specific antibiogram

Resistance data/ antibiogram should also be considered when developing facility specific antibiotic use guidance

# Reporting/ Feedback Process

Antibiotic Stewardship Committee/ team will be part of Infection Control and Prevention Program (IPCP).

It will report progress to the Quality Assessment and Assurance (QAA) Committee at least annually

New CMS rules mandate IPCP to be reviewed at least annually.

In addition to QAA committee, annual written feedback on facility's antibiotic use and resistance data should be shared with:

- Prescribing providers
- Nursing Staff
- Administration
- Resident and Family Council

Provide written feedback on antibiotic use for each provider on an annual basis

Also share facility specific antibiograms with all the prescribing providers

# Use of Nursing Home Antibigram

- Up to 85% of treatment started empirically
- Where cultures available
  - only 32% of empiric antibiotic appropriate
- Antibigram was distributed to Nursing Staff, Administrators and Physicians in a meeting.
- 6 months later there was a modest increase in appropriateness; however, the difference was not statistically significant

Appropriate Empiric Antibiotic use

[Facility Logo]

Antibiotic Susceptibility Report for Most Frequently Isolated Gram-Negative Organisms (January 2015 to December 2016)

Pathogen	Isolate Tested	Percent Susceptible																			
		Ampicillin	Ampicillin/Sulbactam	Piperacillin/Tazobactam	Cefazolin	Cefepime	Cefoxitin	Ceftazidime	Ceftriaxone	Cefuroxime	Aztreonam	Ertapenem	Meropenem	Amikacin	Gentamicin	Tobramycin	Ciprofloxacin	Levofloxacin	Trimethoprim/Sulfa	Nitrofurantoin <sup>1</sup>	Tetracycline
<i>Escherichia coli</i>	111	53	59	99	86	98	92	98	97	91	98	100	100	100	91	91	58	59	76	99	77
<i>Klebsiella pneumoniae</i>	41	--	78	98	93	98	95	98	98	93	98	100	100	100	98	98	95	95	93	63	83
<i>Proteus mirabilis</i>	41	98	98	100	100	100	100	100	100	100	100	100	100	100	100	75	75	75	75	50	75
<i>Pseudomonas aeruginosa</i>	31	--	--	97	--	97	--	97	--	--	84	--	90	100	74	77	71	71	--	--	--

-- Denotes organism has intrinsic resistance to this antimicrobial

1. Nitrofurantoin is reported for urine sources only

**Summary for Gram-Negative Organisms**

During the 2-year period between January 2015 and December 2016, a total of 111 *E coli* were identified, making it the most commonly identified Gram-negative pathogen. Antibiotic susceptibility of these *E coli* can be summarized as follow:

1. Oral antibiotics with the **highest** susceptibilities (in descending order) were:
  - a. Nitrofurantoin (99%)
  - b. Cefuroxime (91%)
  - c. Cephalexin (86%, as indicated by cefazolin susceptibility)
  - d. Trimethoprim/sulfamethoxazole (76%)
  
2. Susceptibilities of antibiotics available only in intravenous formulation (e.g., ceftriaxone) exceed 90%, except:
  - a. Ampicillin/sulbactam (59%)
  - b. Cefazolin (86%)

Antibiotic susceptibility data can be useful for guiding selection of empiric antibiotic therapy for residents in whom culture and susceptibility data from the past few months are not available.

**[Facility Logo]****Quarterly Antimicrobial Use Summary Report**

This report summarizes all systemic antibiotics (IV, IM, PO) prescribed between [month/year] to [month/year]. A total number of [aa] antibiotic courses in [bb] patients were reviewed. During this three-month period, a total of [cc] antibiotic starts / 1000 resident-days (RD) and [dd] days of therapy (DOT) / 1000 RD were observed. The most common reasons for starting antibiotic therapy were [top 3 infectious syndromes]. The three most frequently prescribed antibiotics were [antibiotic names]. Of all the antibiotic courses initiated during this period, [ee]% of courses of therapy were appropriate based on [McGeer, Loeb] criteria. The table below further details antibiotic prescribing patterns and appropriateness during this period.

**Cumulative Antimicrobial Use Summary Report for 20[XX]**

Quarter	New Antibiotic Start / 1000 RD	DOT / 1000 RD	Top 3 Antibiotics with highest DOT / 1000 RD	Top 3 Indications for Starting Antibiotic Therapy	Met Criteria for Initiating Antibiotic Therapy
<b>First Quarter:</b> <i>January to March</i>	[cc]	[dd]	Ciprofloxacin (ff DOT/1000 RD)  Cephalexin (gg DOT/1000 RD)  Amoxicillin (hh DOT/1000 RD)	UTI (ii %)  SSTI (jj %)  ARI (kk %)	UTI (ll %)  SSTI (mm %)  ARI (nn %)  Overall [ee]%
<b>Second Quarter:</b> <i>April to June</i>					
<b>Third Quarter:</b> <i>July to September</i>					
<b>Fourth Quarter:</b> <i>October to December</i>					

Abbreviations: RD = resident-day; DOT = days of therapy; UTI = urinary tract infection; SSTI = skin and soft tissue infection; ARI = acute respiratory infection

# Sample Antibiotic Use Summary Report

is available at  
Nebraska ASAP  
website

<https://asap.nebraskamed.com/long-term-care/tools-templates-long-term-care>

# Education

- **Nursing staff**
- **Prescribing providers**
  
- **Families**
- **Residents**
- **Resident and Family Council**

- Need of antibiotic stewardship program and its goals
- Understanding of antibiotic use protocols
- Responsibility of each healthcare worker for ensuring its implementation.

- Dangers of antibiotic misuse
- Role of antibiotic stewardship program in promoting appropriate antibiotic use

# Impact of On-Line Course for Nurses

The screenshot shows the CourseSites interface for the course "Improving the Care of Long-Term Care Facility Residents with Infections". At the top, there are social media sharing options for Twitter, Google+, and Facebook (4K shares). Below the title, there are two main buttons: "Self-Enroll in this course" and "Login as an enrolled student". Underneath, the "Instructor(s)" section lists three individuals: Sue Shick, Robin Jump, and Rebecca Carter. At the bottom, there is a section for "Open Educational Resource" with a note that no resources have been shared and instructions on how to gain access.

After the course, nurses' agreement that their role influences whether residents receive antimicrobials also increased significantly

Wilson BM et al. Am J Infect Control. 2017 May 1;45(5):466-470

# ANTIMICROBIAL STEWARDSHIP PROGRAM

## What is an Antimicrobial Stewardship Program?

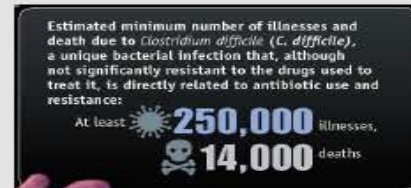

An Antimicrobial Stewardship Program is a set of systematic activities aimed to promote the appropriate use of antimicrobials.

The program goals are to:

- ❑ Improve quality of patient care and patient outcomes
- ❑ Minimize side effects from antimicrobials
- ❑ Limit the development of antimicrobial resistance
- ❑ Educate providers on when to prescribe antimicrobials, and the right drug, dose and duration to use

## Why is Antimicrobial Stewardship Program needed?

- ❑ Up to 75% of antimicrobial use is considered inappropriate
- ❑ Inappropriate use will increase antimicrobial resistance and lead to unwanted side effects (*Clostridium difficile* infection)
- ❑ An Antimicrobial Stewardship Program can improve patient outcomes and reduce inappropriate antimicrobial use

## How can Antimicrobial Stewardship Program be implemented?

Practical steps of implementation include:

1. Obtain program support from facility leadership
2. Partner with regional physicians or pharmacists with infectious diseases or antimicrobial stewardship expertise
3. Form an Antimicrobial Stewardship Committee
4. Review data on infection assessment practices, and antimicrobial use and resistance patterns
5. Determine program goals such as the types and extents of interventions (e.g., use assessment tools for all suspected infections, eliminate treatment of asymptomatic bacteriuria)
6. Educate prescribers and staff on the types, reasons and goals of the selected interventions.
7. Track outcomes after implementation of interventions
8. Report and educate program activities and outcomes to prescribers, staff and residents/families

**The Core Elements of Antibiotic Stewardship for Nursing Homes**

Summary of Core Elements for Antibiotic Stewardship in Nursing Homes:

- Leadership commitment**  
Develops, supports and oversees the program and antimicrobial stewardship in your facility.
- Accountability**  
Medical, pharmacy, nursing and primary care responsible for promoting and ensuring antibiotic stewardship in your facility.
- Drug expertise**  
Infectious diseases, clinical pharmacology or other specialists with expertise in handling of your facility.
- Action**  
Implement at least one policy or practice to improve antibiotic use.
- Tracking**  
Monitor at least one practice element of antibiotic use and at least one outcome from antibiotic use over your facility.
- Reporting**  
Provide regular feedback on antibiotic use and resistance to prescribers, clinicians, nursing staff and other relevant staff.
- Education**  
Provide education to clinicians, nursing staff, residents and families about antibiotic resistance and importance for appropriate antibiotic use.

## Who should be part of the program?

Ideally everyone who is involved in the antibiotic use process:

- ❑ Medical Directors: set standards for antibiotic prescribing practices
- ❑ Directors of Nursing: set standards for nursing practices
- ❑ Infection Preventionists: be responsible for the Infection Prevention and Control Program and support Antimicrobial Stewardship Program activities
- ❑ Consultant Pharmacists: perform drug use review, provide antibiotic use data and assist with developing treatment guidelines
- ❑ Prescribers: prescribe antimicrobials only when clearly indicated
- ❑ Nursing staff: evaluate patient using standardized assessment tools and communicate patients' symptoms to prescribers

Content developed based on resources provided by the Centers for Disease Control and Prevention (CDC) – retrieved October 2017 from <https://www.cdc.gov/drugresistance/threat-report-2013/index.html> and <https://www.cdc.gov/longtermcare/prevention/antibiotic-stewardship.html>.

# Summary of the Steps

Obtain leadership statement of support

Establish accountability

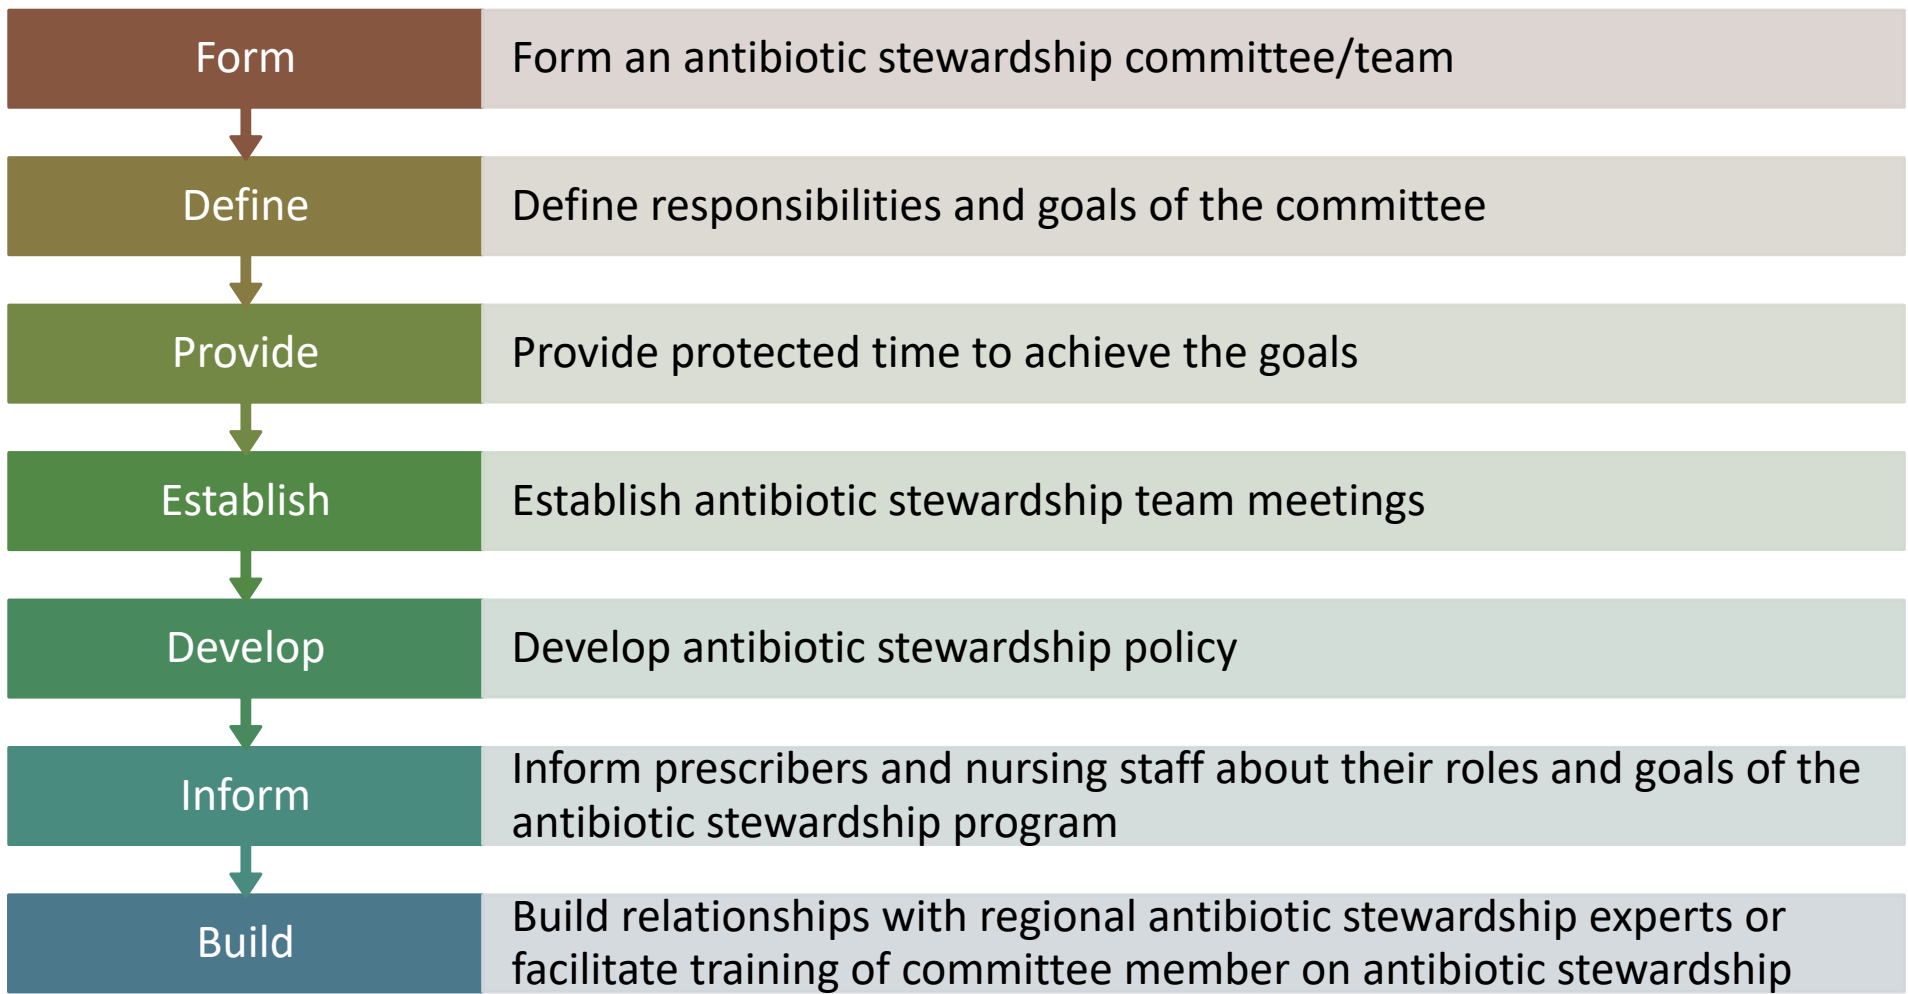

Partner with local experts or develop expertise within the facility

Develop Antibiotic Stewardship Protocol

Form an Antibiotic Stewardship Committee/Team

Task Antibiotic Stewardship Committee with Specific Responsibilities

- Support and promote antibiotic use protocols
- Develop and maintain a system to monitor antibiotic use
- Develop and maintain a system to monitor resistance data
- Report antibiotic use and resistance data regularly to frontline staff and prescribing providers along with goals of antibiotic stewardship programs
- Provide education on antibiotic stewardship to prescribing providers and nursing staff in addition to residents and families

- ✓ Leadership commitment
- ✓ Accountability
- ✓ Drug Expertise

## 12 Common Nursing Home Situations in Which Systemic Antibiotics are Generally Not Indicated

1. Positive urine culture in an asymptomatic resident.
2. Urine culture ordered solely because of change in urine appearance.
3. Nonspecific symptoms or signs not referable to the urinary tract, such as falls or mental status change (with or without a positive urine culture).
4. Upper respiratory infection (common cold).
5. Bronchitis or asthma in a resident who does not have COPD.
6. "Infiltrate" on chest x-ray in the absence of clinically significant symptoms.
7. Suspected or proven influenza in the absence of a secondary infection (but DO treat influenza with antivirals).
8. Respiratory symptoms in a resident with advanced dementia, on palliative care, or at the end of life.
9. Skin wound without cellulitis, sepsis, or osteomyelitis (regardless of culture result).
10. Small (<5cm) localized abscess without significant surrounding cellulitis (drainage is required of all abscesses).
11. Decubitus ulcer in a resident at the end of life.
12. Acute vomiting and/or diarrhea in the absence of a positive culture for shigella or salmonella, or a positive toxin assay for Clostridium difficile.

# Dissecting Data for Antibiotic Stewardship

Ask basic questions on antibiotic use:

- How much antibiotics are we using?
- For what reasons are we using antibiotics?
- Which antibiotics are we using the most?
- Who is prescribing antibiotics?
- What proportion of the use is

# Broad Categories of Data Required for Antibiotic Stewardship Program

## Antibiotic Use Measures

- Antibiotic Starts/ 1000 resident days
- Antibiotic days of therapy/1000 resident days

## Process Measure

- Proportion of antibiotic orders with dose, duration and indication
- Proportion of antibiotic orders with related clinical documentation
- Proportion of antibiotic orders that meet standard criteria/guidelines

## Outcome Measures

- Antimicrobial Resistance
- Antibiotic-associated adverse events
- *C. difficile* infections

# Data Sources for Antibiotic Stewardship

## Dispensing Pharmacy

- Antibiotic starts
- Days of therapy
- Use by Class
- Use by Diagnosis
- Use by Provider
- Regional comparison

## Consultant Pharmacist

- Appropriateness of orders
- Orders meeting criteria/guidance
- Documentation compliance
- Bug-drug mismatches
- Adverse events

## Microbiology Laboratory

- Diagnostic test utilization
- Antibiogram
- List of positive test results for specific pathogens

## Infection Preventionist

- Antibiotic use information from infection log
- Infection rates
- Orders meeting standard criteria
- Nursing protocol compliance
- MDRO prevalence

Use

- Use a standardized approach in defining antibiotic appropriateness when performing surveillance:

Determine

- Determine whether meeting a standard criteria (such as Loeb's criteria)

Assess

- Assess whether facility protocol for prescribing is being followed (such as conditions for prescribing were met as per the adapted SBAR tool)

Evaluate

- Evaluate whether the order is consistent with published national guidelines or recommendations

# Surveillance of Antibiotic Prescribing Practices

# Published Guidance on Management of Common Infections

- Diagnosis and Management of Skin and Soft Tissue Infection: Stevens DL, et al. Clin Infect Dis 2014;59:e10-52
- Appropriate Antibiotic Use for Acute Respiratory Tract Infection in Adults: Harris AM, et al. Ann Intern Med 2016.
- Management of Community-Acquired Pneumonia in Adults: Mandell LA, et al. Clin Infect Dis 2007;44;S27-72.
- Treatment of Acute Uncomplicated Cystitis and Pyelonephritis in Women: Gupta K et al. Clin Infect Dis 2011;52:e103-20.
- Diagnosis, Prevention, and Treatment of Catheter-Associated Urinary Tract Infection in Adults: Hooton TM, et al. Clin Infect Dis 2010;50:625-63.
- Diagnosis of Uncomplicated Cystitis in Nursing Home Residents: Nace DA et al. J Am Med Dir Assoc. 2018 Sep;19(9):765-769.e3
- Decision Tool for the Empiric Treatment of Suspected Urinary Tract Infection in Frail Older Adults: van Buul LM et al. J Am Med Dir Assoc. 2018 Sep;19(9):757-764

**Table 1. Recommended Duration of Therapy**

Infection Syndrome	Typical Duration of Therapy
Uncomplicated cystitis <sup>1,2</sup>	5 days for Nitrofurantoin 3 days for TMP/SMX 1 dose for Fosfomycin 3 days for Fluoroquinolones 3-7 days for Beta-Lactams
Pyelonephritis <sup>1</sup>	7 days for Fluoroquinolones 14 days for TMP/SMX 10-14 days for Beta-Lactams
Catheter-associated urinary tract infection <sup>3</sup> or complicated* UTI <sup>2,4</sup>	7 days if prompt resolution of symptoms 10-14 days if delayed response to therapy
Pneumonia <sup>5</sup>	5-7 days
Bronchitis <sup>6,7</sup>	No antibiotic therapy is recommended
Acute exacerbation of COPD <sup>8</sup>	5 days if treatment criteria met
Influenza <sup>9,10</sup>	5 days for treatment Minimum of 2 weeks, continuing for at least 7 days after the last known case was identified for chemoprophylaxis in influenza outbreak
Pharyngitis, streptococcal <sup>11</sup>	Up to 10 days for penicillin, amoxicillin, 1 <sup>st</sup> -generation oral cephalosporins, clindamycin 5 days for azithromycin
Sinusitis <sup>12</sup>	5-7 days if improvement after 3-5 days of treatment 7-10 days if delayed response or switched to alternative therapy due to lack of response
Cellulitis or cutaneous abscess <sup>13</sup>	5-7 days
Shingles <sup>14</sup>	7 days for famciclovir, valacyclovir 7-10 days for acyclovir
<i>Clostridium difficile</i> infection <sup>15</sup>	10-14 days 10 days for fidaxomicin
Gastroenteritis, bacterial <sup>16</sup>	3-5 days if treatment criteria met

\* Refer to Table 2 for factors associated with complicated UTI.

Document summarizing **typical length of therapy recommendations** from various guidelines along with all the references is available at Nebraska ASAP Website.

# Loeb's Criteria Checklist for Surveillance

Patient Name: \_\_\_\_\_ MRN: \_\_\_\_\_ Location: \_\_\_\_\_

Date of Infection: \_\_\_\_\_ Date of Review: \_\_\_\_\_ Reviewed by: \_\_\_\_\_

UTI:  evaluated  criteria met      LRTI:  evaluated  criteria met      SSTI:  evaluated  criteria met      FUO:  evaluated  criteria met

Suspected Infection Syndrome	Minimum Criteria for Starting Antibiotic Therapy
<b>Urinary tract infection</b> <i>without catheter</i>	Either one of the following criteria <input type="checkbox"/> Acute dysuria, OR <input type="checkbox"/> Temp >37.9 °C (100 °F) or 1.5 °C (2.4 °F) above baseline, AND ≥1 of the following new or worsening symptoms <input type="checkbox"/> Urgency <input type="checkbox"/> Frequency <input type="checkbox"/> Suprapubic pain <input type="checkbox"/> Gross hematuria <input type="checkbox"/> Urinary incontinence <input type="checkbox"/> Costovertebral angle tenderness
<i>with catheter</i>	At least one of the following criteria <input type="checkbox"/> Rigors <input type="checkbox"/> Temp >37.9 °C (100 °F) or 1.5 °C (2.4 °F) above baseline <input type="checkbox"/> New onset delirium <input type="checkbox"/> New costovertebral angle tenderness
<p><b>Note:</b> Residents with intermittent catheterization or condom catheter should be categorized as "without catheter"                      Urine culture should be sent prior to starting antibiotics                      Antibiotics should not be started for cloudy or foul smelling urine</p>	
<b>Lower respiratory tract infection</b> <i>with temp &gt;38.9 °C (102 °F)</i>	At least one of the following criteria <input type="checkbox"/> Productive cough <input type="checkbox"/> Respiratory rate >25 breaths / minute
<i>with temp &gt;37.9 °C (100 °F) or 1.5 °C (2.4 °F) above baseline</i>	Both of the following criteria <input type="checkbox"/> Cough, AND <input type="checkbox"/> At least one of the following criteria <input type="checkbox"/> Pulse >100 beats / minutes <input type="checkbox"/> Delirium <input type="checkbox"/> Rigors <input type="checkbox"/> Respiratory rate >25 breaths / minute
<i>afebrile with COPD and &gt;65 years old</i>	Both of the following criteria <input type="checkbox"/> New or increased cough <input type="checkbox"/> Purulent sputum production

<i>afebrile without COPD</i>	All of the following criteria <input type="checkbox"/> New cough <input type="checkbox"/> Purulent sputum production <input type="checkbox"/> At least one of the following criteria <input type="checkbox"/> Delirium <input type="checkbox"/> Respiratory rate >25 breaths / minute
<i>with new infiltrate on chest X-ray consistent with pneumonia</i>	At least one of the following criteria <input type="checkbox"/> Productive cough <input type="checkbox"/> Temp >37.9 °C (100 °F) or 1.5 °C (2.4 °F) above baseline <input type="checkbox"/> Respiratory rate >25 breaths / minute
<p><b>Note:</b> Consider ordering chest X-ray and CBC with differential for febrile residents with cough and any of these criteria (HR &gt;100, worsening mental status, or rigors)                      Antibiotics should not be used for up to 24 h after large-volume aspiration in those without COPD but with temp ≤38.9°C (102 °F) and non-productive cough</p>	
<b>Skin and soft-tissue infection</b>	Either one of the following criteria <input type="checkbox"/> New or increasing purulent drainage, OR <input type="checkbox"/> At least two of the following criteria <input type="checkbox"/> Redness (erythema) <input type="checkbox"/> Temp >37.9 °C (100 °F) or 1.5 °C (2.4 °F) above baseline <input type="checkbox"/> Tenderness <input type="checkbox"/> New or increasing swelling at affected site <input type="checkbox"/> Warmth
<p><b>Note:</b> These criteria do not apply to residents with burns                      Surgical consultation and hospitalization are required for certain soft-tissue infections (e.g., necrotizing fasciitis or gas gangrene)</p>	
<b>Fever where the Focus of Infection is Unknown</b>	Both of the following criteria <input type="checkbox"/> Temp >37.9 °C (100 °F) or 1.5 °C (2.4 °F) above baseline, AND <input type="checkbox"/> At least one of the following criteria <input type="checkbox"/> Rigors <input type="checkbox"/> Delirium
<p><b>Note:</b> Antibiotic should not be started in residents with fever and altered mental status that does not meet delirium criteria (e.g., reduced functional activities, withdrawal, loss of appetite)</p>

ANTIBIOTIC STARTS / 1000 RESIDENT-DAYS

SBAR USAGE RATES

ANTIBIOTIC DAYS OF THERAPY / 1000 RESIDENT-DAYS

CASES MEETING CRITERIA FOR ANTIBIOTICS WHEN SBAR WAS USED

# One-Day Point Prevalence Method for Tracking Antibiotic Use

- Useful in estimating antibiotic days of therapy
- Requires antibiotic tracking on one day of the week only
- Gives an estimate but not exact use
- Use the following equation to estimate days of therapy

$$\frac{\sum \text{Wednesday Point Prevalence AU}}{(\text{Average Daily Census} * \text{Number of Wednesdays in Month})} * 1,000$$

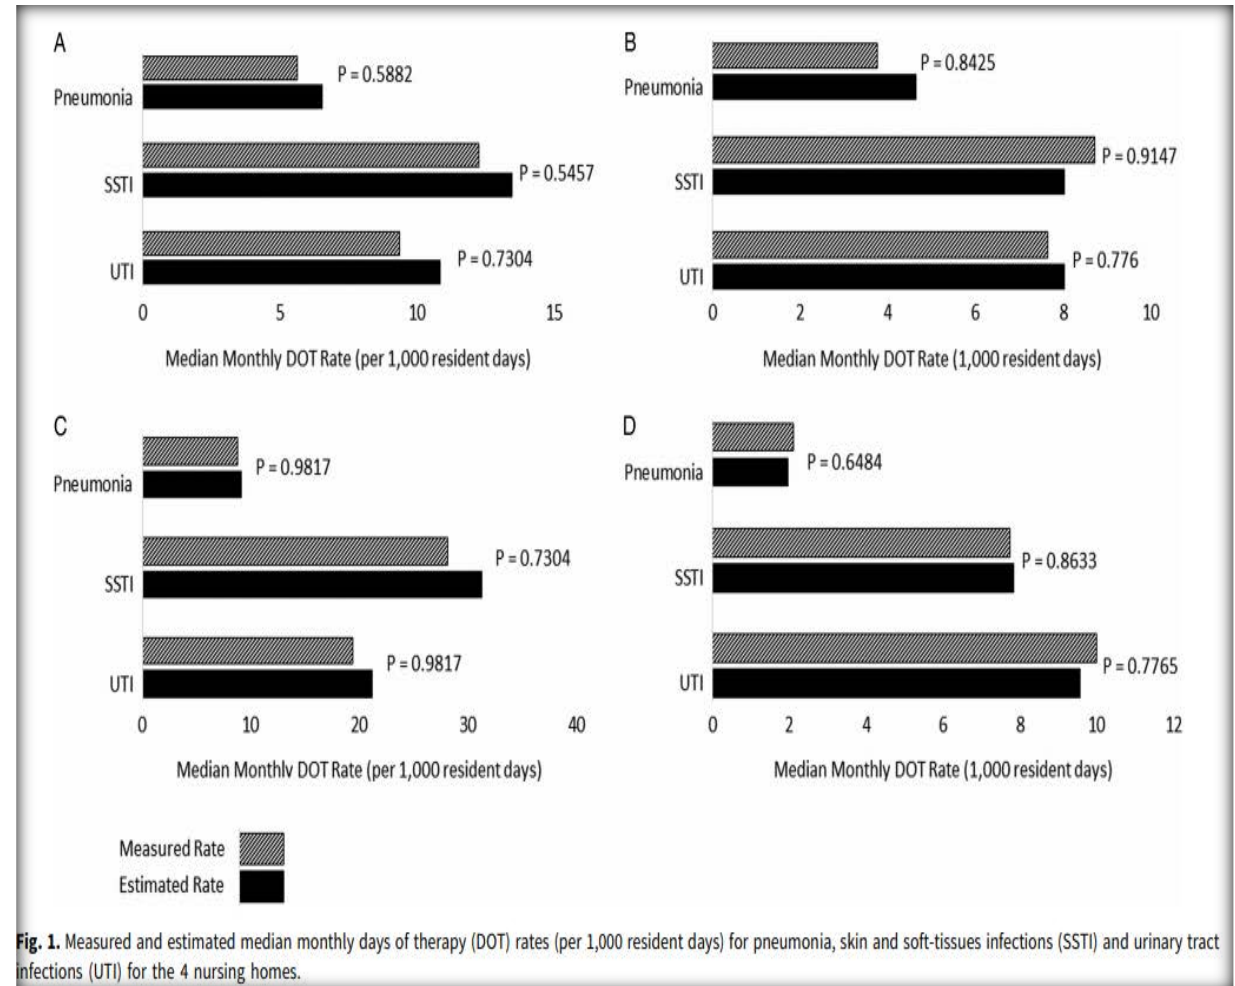

Fig. 1. Measured and estimated median monthly days of therapy (DOT) rates (per 1,000 resident days) for pneumonia, skin and soft-tissues infections (SSTI) and urinary tract infections (UTI) for the 4 nursing homes.

# Understanding and Creating Antibiogram

Guidelines on creating antibiograms recommends to:

- report antibiogram at least annually
- include only verified final results
- include only species with data for 30 isolates
- include only diagnostic (not surveillance) isolates
- include the first isolate of a species obtained from a patient for each analysis period

Hypothetical Healthcare Facility  
1 January-31 December 2017 Cumulative Antimicrobial Susceptibility Report+  
Percent Susceptible

Gram (-) Organisms	# of Isolates	Amoxicillin/ Clavulanate	Cefazolin	Ceftriaxone	Cefepime	Nitrofurantoin	Piperacillin/ Tazobactam	Ciprofloxacin	Gentamicin	TMP/SMX

# Approaches to Creating an Antibiogram with Limited Isolates

**Table 1**

Advantages and Limitations of the Potential Approaches to Creating a LTCF Antibiogram

Approach		
Extending the antibiogram data beyond 1 year	Advantages	<ul style="list-style-type: none"> <li>• Simple and easy to create</li> <li>• Accurate susceptibilities over the given time period</li> </ul>
	Limitation	<ul style="list-style-type: none"> <li>• Resistance rates and patterns of bacteria may change from year to year</li> </ul>
Creating a regional antibiogram	Advantage	<ul style="list-style-type: none"> <li>• May be helpful if residents access healthcare facilities throughout that given region</li> </ul>
	Limitations	<ul style="list-style-type: none"> <li>• Requires coordination between multiple microbiology laboratories and healthcare facilities</li> <li>• Bacteria that infect residents may not have similar antimicrobial susceptibilities to those of that region's general population</li> </ul>
Using antibiograms of nearby hospitals	Advantage	<ul style="list-style-type: none"> <li>• Antibiograms that are already annually made by the hospitals could be used</li> </ul>
	Limitations	<ul style="list-style-type: none"> <li>• All residents go to different hospitals</li> <li>• Bacteria that infect LTCF residents may not have similar antimicrobial susceptibilities to those of the general hospital population</li> </ul>
Collapsed antibiograms	Advantage	<ul style="list-style-type: none"> <li>• May help guide infection-specific empiric antibiotic choices</li> </ul>
	Limitation	<ul style="list-style-type: none"> <li>• Intrinsic resistance of some bacteria to specific antibiotics would not be listed</li> </ul>

# Using Baseline Data to Form an Action Plan

Antibiotic Use Measures	Rate
Antibiotic Starts	7.35/1000 resident days
Days of Therapy	57.51/1000 resident days

Indications	Number (%)
Urinary tract infection	39 (35)
Skin/soft-tissue infection	28 (25)
Respiratory tract infection	9
No indication	8
Pneumonia	6
Gastrointestinal infection	4
COPD	3
Fever	2
Urinary tract infection prophylaxis	2
Others	9

Most frequently used antibiotics	Number (%)
Ciprofloxacin/Levofloxacin	27 (22)
Cephalexin	26 (21)
Nitrofurantoin	18 (15)
Doxycycline	11 (9)
Others	42 (34)

Met criteria to start antibiotic– 16 (41%)  
 Didn't Meet criteria - 23 (59%)

- What are the top improvement opportunities?
- What Actions would you like to take?

# Antibiotic Time-Out

## Goals are to determine:

- Whether initial symptoms were due to bacterial infection that requires antibiotic?
- If yes, is the current antimicrobial treatment appropriate (e.g ruling out bug-drug mismatch, reconfirming agent, dose, route)?
- Can antibiotics be deescalated?
- What will be the length of therapy?
- Is further evaluation required?

<https://asap.nebraskamed.com/long-term-care/tools-templates-long-term-care/>  
<https://www.cdc.gov/longtermcare/pdfs/core-elements-antibiotic-stewardship-appendix-a.pdf>

# Example of Provider Feedback

## PMNH Antibiotic Report Card for Treatment of Respiratory Infection, 2014

Provider	Antibiotic starts	Appropriate	Not appropriate*	Percent not appropriate
Provider 1	38	36	2	5.3
Provider 2	24	23	1	4.2
Provider 3	8	6	2	25
Provider 4	2	2	0	0
Provider 5	0	0	0	0
PMNH cumulative	72	67	5	6.9

\* Nursing home residents' clinical symptoms met the McGeer Surveillance Criteria for diagnosis of viral respiratory infection.

© 2016 The Pew Charitable Trusts

This facility was highlighted in a report for successfully implementing ASP.

Multiple interventions were implemented including communication tools, vigorous review of antibiotic orders and introducing antibiograms

However, one of the main interventions were to provide Feedback to the providers in addition to one on one discussions by medical director

# Choosing the Right Intervention

Target for Intervention	Intervention
Antibiotics being prescribed even when clinical criteria for infection are not met	<ul style="list-style-type: none"> <li>• SBAR tool implementation</li> </ul>
Diagnostic tests being sent unnecessarily	<ul style="list-style-type: none"> <li>• SBAR tool implementation</li> <li>• Use of Decision-making algorithm</li> </ul>
Broad spectrum agent being used unnecessarily	<ul style="list-style-type: none"> <li>• Develop facility-specific guidance</li> <li>• Implement antibiotic time-out</li> </ul>
Bug-drug mismatches	<ul style="list-style-type: none"> <li>• Antibigram use for empiric treatment</li> </ul>
Continuation of empiric antibiotics even after infection ruled out	<ul style="list-style-type: none"> <li>• Implement antibiotic time-out</li> </ul>
Inappropriate length of therapy	<ul style="list-style-type: none"> <li>• Develop facility-specific guidance</li> <li>• Implement antibiotic time-out</li> </ul>
Unnecessary antibiotics being started by outside providers	<ul style="list-style-type: none"> <li>• Implement mandatory review of necessity by medical directors for all outside antibiotic orders</li> <li>• Antibiotic time-out</li> </ul>
Unnecessary antibiotics being started by specific providers	<ul style="list-style-type: none"> <li>• Consider providing specific feedback to the providers</li> </ul>

Provide relevant education to nursing staff and prescribers about the intervention

Engage consultant pharmacists in reviewing antibiotic orders and provide feedback to prescribers when improvement opportunities are found

Build partnership, whenever possible, with local antibiotic stewardship experts for their input on the interventions and facility specific protocols

# Report the Data to Providers and Staff

What we have achieved so far?

## 2018 Antimicrobial Stewardship Program Report

### Purpose

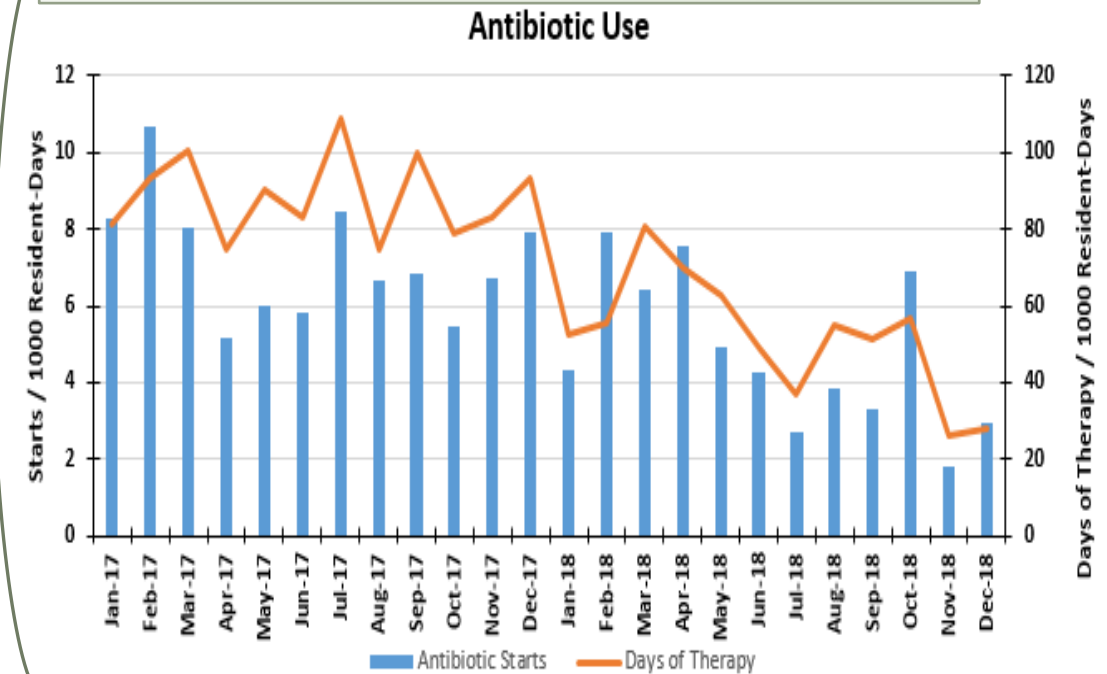

The purpose of this brief report is to summarize [ Facility Name ] Antimicrobial Stewardship Program (ASP) accomplishments in 2018 and outline ASP goals for 2019.

### Summary of Antimicrobial Stewardship Program Accomplishments in 2018

- Implemented the use of SBAR (standard staff-provider communication tools) for suspected urinary tract, respiratory tract and skin/soft-tissue infections
- Compliance with the use of SBAR for suspected urinary tract infection reached 85-90%
- Provided mandatory annual antimicrobial stewardship education to [number] facility staff
- Reduced antibiotic starts by 34% from 7.17 starts/1000 resident-days in 2017 to 4.73 starts/1000 resident-days in 2018
- Decreased antibiotic days of therapy by 41% from 88.52 days of therapy/1000 resident-days in 2017 to 51.99 days of therapy/1000 resident-days in 2018
- No facility-onset *Clostridioides difficile* infection (CDI) was identified
- Reviewed antibiotic prescribing for respiratory tract infections (50% orders meeting criteria)

Where we can improve further?

What will be our goals now?

### Antimicrobial Stewardship Program Goals for 2019

- Increase compliance to SBAR usage for suspected urinary tract infection to 95%
- Further reduce antibiotic starts and days of therapy by 20%
- Implement SBAR for respiratory tract infections

### Concluding Remarks

The Antimicrobial Stewardship Program successes accomplished in 2018 are due to the diligent work of facility staff and support of facility providers in an effort to continue to improve the quality of care for residents at [ ]. The ASP team hopes that staff and providers continues these efforts in 2019.

How are we going to achieve it?

# Antibiotic Stewardship: A Cycle of Reassessments and Readjustments

- Develop plans to address barriers
- Report/re-educate providers
- Execute mitigation plans

- Review data
- Identify opportunities
- Develop action plan
- Inform/report providers

**4**  
**Act**

**1**  
**Plan**

**3**  
**Study**

**2**  
**Do**

- Analyze data
- Study outcomes
- Identify implementation barriers

- Implement Action
- Educate providers
- Track antibiotic use
- Track process measures

IMPROVE PATIENT OUTCOMES AND PREVENT ANTIBIOTIC RESISTANCE**

# Stewardship: Overcoming Barriers

# Key Challenges to Successful Antibiotic Stewardship Programs

Clinician resistance—nurse, physician, nurse practitioner, physician’s assistants

Family pressure

Resources and turnover

# Challenges related to beliefs and pressure

Belief in urinalysis as the  
gold standard

Cloudy or smelly urine as  
symptoms

The need to treat

# Is a positive urinalysis really an indicator?

Nearly half of residents have bacteria in urine<sup>1</sup>

Vague symptoms (falling) and a urinalysis leads to an antibiotic

Likelihood of clean catch low; 14% clean<sup>2</sup>

# Cloudy or smelly urine

Dr. Google says so<sup>1,2</sup>

Cloudy = dehydration<sup>3</sup>, infections, kidney problems, some chronic diseases.

Smelly = dehydration<sup>3</sup>, specific foods, other disorders, infections

None of the current guidelines use them

# The need to treat

Pressures from family and other clinicians to treat

Concerns about state surveyors—nursing home pressure to “treat”

Antibiotics seen as key

# Addressing Challenges

## Education and re-education

- Educate nurses and prescribing clinicians about true symptoms, risks of antibiotics, treatment alternatives to antibiotics

## Institute supporting policies and procedures

- Improve communication
- Support for when state comes in

# Education and Policy Support

**Education:** AHRQ Nursing Home Guide, Quality Innovation Networks Quality Improvement Organization, state health departments, CDC

**Policy:** Society's Antibiotic Stewardship Policy's Appendix 2 (sample policy), Minnesota Department of Health

## R – Request for Physician/NP/PA Orders

Orders were provided by clinician through  Phone  Fax  In Person  Other \_\_\_\_\_

Chest X-Ray

For cough, consider using a cough suppressant Dose \_\_\_\_\_ Route \_\_\_\_\_ Duration \_\_\_\_\_

For cough, consider using an inhaler/nebulizer Dose \_\_\_\_\_ Duration \_\_\_\_\_

Acetaminophen \_\_\_\_\_ mg. Route \_\_\_\_\_ Duration \_\_\_\_\_

Raise upper body (use multiple pillows) to sleep/rest

Encourage \_\_\_\_\_ ounces of fluid by mouth or G-Tube for \_\_\_\_\_ hours

Record fluid intake

Encourage salt water gargles

Assess vital signs, including temp, every \_\_\_\_\_ hours for \_\_\_\_\_ hours

Notify Physician/NP/PA if symptoms worsen or if unresolved in \_\_\_\_\_ hours

Initiate intravenous fluid hydration and/or  initiate hypodermoclysis.

Initiate the following antibiotic(s)

Report funded under contract no. HHS A HHS A290201000018I, Task Order 2 from the Agency for Healthcare Research and Quality (AHRQ).

## Addressing Family Pressure

Educate and agree on antibiotic stewardship when residents move in

- CDC, AHRQ

Educate nurses and aides in engaging with family members

- AHRQ Nursing Home Antimicrobial Stewardship Guide Talking Points for Residents and Family Members

# Sample: Prepare Families

Here at [FACILITY NAME], we take antibiotic use very seriously, so we are pleased to let you know that we have an antibiotic stewardship policy and program. Antibiotic stewardship is the practice of improving antibiotic use.

[FACILITY NAME] is taking action to make sure that our residents get the best care. Our antibiotic stewardship program goals include:

- making sure residents get antibiotics only when necessary—for bacterial infections, and
- making sure residents get the right antibiotic, at the right time, for the right length of time.

# Sample Talking Points

## What are the risks—or harms—of antibiotics?

- Antibiotics are important for treating you when you definitely have an infection, but unneeded antibiotics can do more harm than good
- Before taking an antibiotic, it is important to understand how antibiotics could harm or hurt you. There are five potential health problems that occur as a result of taking an antibiotic.
  - Allergic reactions, like a rash or swelling.
  - Side effects, such as a stomach upset.
  - Drug interactions.
  - An infection called *Clostridium difficile* or *C. diff*.
  - Antibiotic resistance.

# Challenges: Resources and turnover

## Lack of money and staff

- Urge leadership to focus more infection preventionist time on antibiotic stewardship
- Make antibiotic stewardship a focus of monthly meetings
- Use free resources, obtain support from QIN-QIOs

## Turnover/agency staff

- Institute processes everyone follows
  - Communication tools
  - Suspected UTI SBAR
- Constant education

## Question #8

**True or False:**

It's no big deal if a few bacteria become resistant to some kinds of antibiotics - there's always something else you can take.

**Answer: False**

- Don't count on being able to use something else if a "superbug" makes you sick.
- We only have a limited number of antibiotics available. Often, "superbugs" have to be treated with stronger antibiotics.
- These stronger drugs may have more side effects - and you may have to stay in the hospital, and have them given through a vein!
